

5 BIG REASONS TO EVALUATE BOSPULSE

BOSPulse is the most capable pulsation modeling and analysis program on the market. BOSPulse provides efficient and comprehensive coverage for API 618 and API 674 studies. It also provides powerful features for AIV/FIV modeling, and root cause analysis (failure) of harmonic/pulsation sources

1 SPEED UP YOUR WORK

- Optimized workflows, intuitive UIs, & amazingly fast solvers. Our products make you faster.

2 ADVANCED CAPABILITIES

- Super-fast harmonic solver with transient solution accuracy
- Efficient management of multiple operating scenarios
- Combined fluid, piping, and structural models for full mechanical response analysis
- Parameter sweeps condense dozens or hundreds of analysis cases into a single “run”
- Extensive reporting options

3 LOWER COST

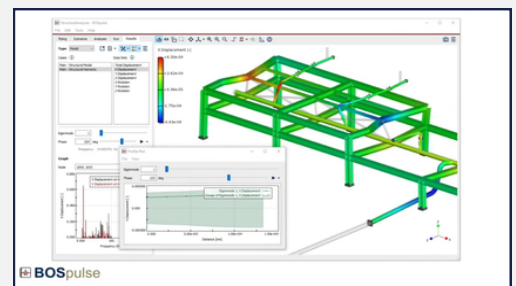

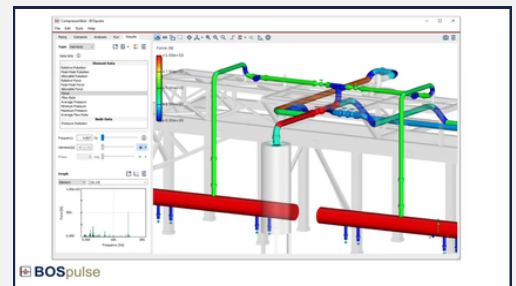

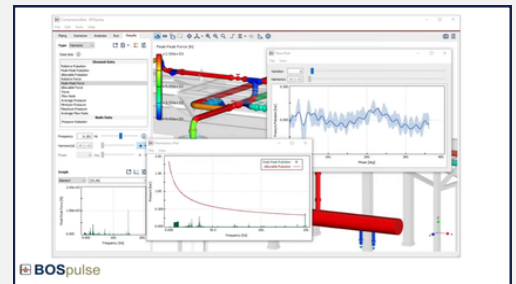

- Our products cover more analysis domains. Static, transient, process design, harmonic, and support for integrated mechanical and structural analysis, all in one product.

4 COMPREHENSIVE TRAINING

- Online, in-person, or hybrid training for both custom and “off the shelf” content.

5 SEAMLESS INTEGRATION

- Seamless integration with CAESAR II, ANSYS, and many other programs.
- Open-standards access to the results database so you can use the results.

Bonus Reason: Superb, Responsive Technical Support

DRG's engineering and software support staff regularly uses our software to do real project work. Our technical support staff are experienced, knowledgeable, and responsive.
